

1	Course Name:
	Introduction to Computing and Information Systems
2	Course Code:
	IDB10103
3	Year and Semester Offered:
	Year 1 Semester 1
4	Credit Hours Value:
	3 Credit Hours [3 SLT Credit]
5	Prerequisite(s), if applicable:
	NA
6	Course Synopsis:
	This course is designed to describe the computer components and environment in today's technology. The course will cover basic hardware and software concepts, programs and apps, the use of internet, network and communication, mobile computing and computer applications. Students are also introduced to the basic concept of database and the digital storage that will apply to the knowledge management in computing system.
7	Course Learning Outcome:
	Upon completion of the course, students should be able to: 1. Determine the information system component in current technology and organization. 2. Apply the basic use of digital storage, internet, network, communication and the application system that been widely used in current computing technology. 3. Explain the impact of information system by creating a basic application using system development methodology.
8	Content Outline:
	Topic
	1. Introduction to Information System in Today's Technologies and Organizations
	2. Introduction to Hardware
	3. Introduction to Software
	4. Database Systems and Applications
	5. E-Commerce (Electric Commerce)
	6. System Development & Application Development
	7. Internet, Network & Communicating Digital Content
	8. Information System Resources Application & Decision Support Systems
	9. Digital Impact, Privacy and Security
	10. Industry Talk / Visits
