

1	Course Name:
	PROMPT ENGINEERING
2	Course Code:
	IQB21003
3	Year and Semester Offered:
	Year 2 Semester 1
4	Credit Hours Value:
	3 Credit Hours [3 SLT Credit]
5	Prerequisite(s), if applicable:
	NA
6	Course Synopsis:
	This course introduces students to prompt engineering, the skill of crafting and refining inputs to optimize AI-generated responses from Large Language Models (LLMs). Through a hands-on, industry-focused approach, students will experiment with real-world AI tools, debug outputs, and apply structured prompting techniques to improve model performance. By the end of the course, students will have practical experience using prompt engineering for problem-solving, digital automation, and interactive AI applications.
7	Course Learning Outcome:
	Upon completion of the course, students should be able to: 1. Apply knowledge of AI models and prompt engineering techniques to generate structured and optimized responses. 2. Perform AI-generated outputs by using effective prompt engineering strategies to improve accuracy and reliability. 3. Demonstrate problem-solving and ethical AI usage skills in real-world applications through hands-on projects and industry-relevant case studies..
8	Content Outline:
	Topic
	1. Introduction to Prompt Engineering
	2. Understanding AI Model Behavior
	3. Crafting Basic Prompts
	4. Structuring Advanced Prompts
	5. Ethical Consideration in Prompt Engineering
	6. Case studies about Real-World Applications
	7. Future Trends in Prompt Engineering
